DC-10

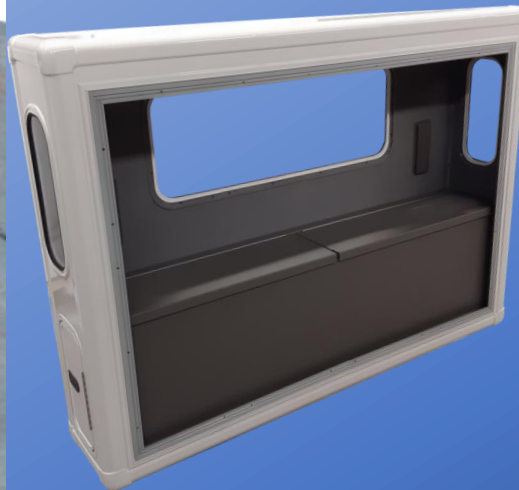

The DC-10 offers the perfect solution for The Kenworth class 8 models. Offering a new solution to drivers, the DC-10 gives drivers that little bit of extra room to store items in the cab. The DC-10 provides the additional space drivers always need for under 100 lb. Where space allows, rear access doors can be added to allow drivers to store wet boots and gloves on the ground.

DC-16

Introducing the DC-16, the ultimate solution for maximizing cab space in your vehicle! With 32 cu ft of customizable space, this lightweight design weighs less than 140 lbs fully installed. The DC-16 offers optional interior cabinets to perfectly suit your needs, with individual cabinets on each side and a through cabinet option for continuous side to side storage access. Plus, the waterproof floor areas make cleaning a breeze.

DC-22

The DC-22 is the perfect solution when you need lots of working room and want to keep your clothes and sensitive equipment warm and dry. The ample space allows up-fitters to customize the area to suit your applications. Your crews also get full access to the in-cab equipment from outside. When installed, the DC-22 adds as little as 160 lb; giving you a large working space with minimal impact on your haul capacity.

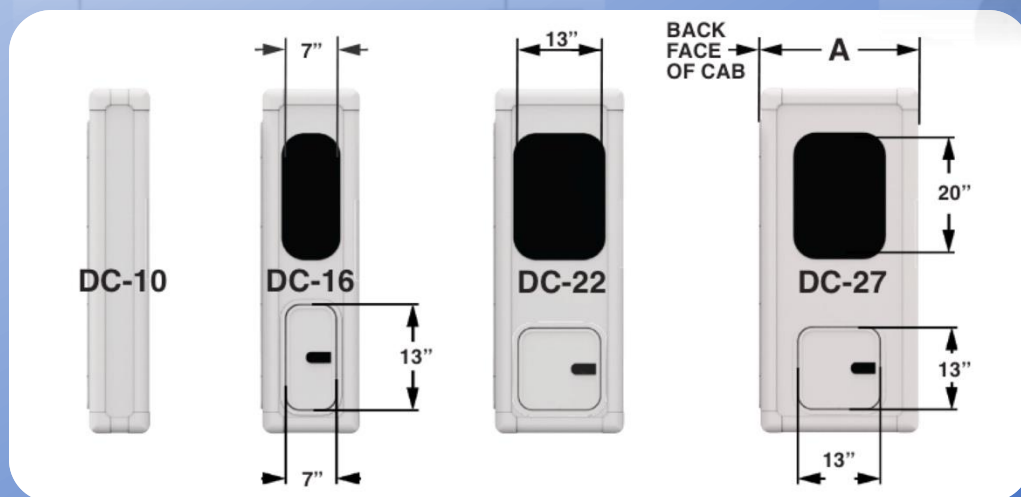

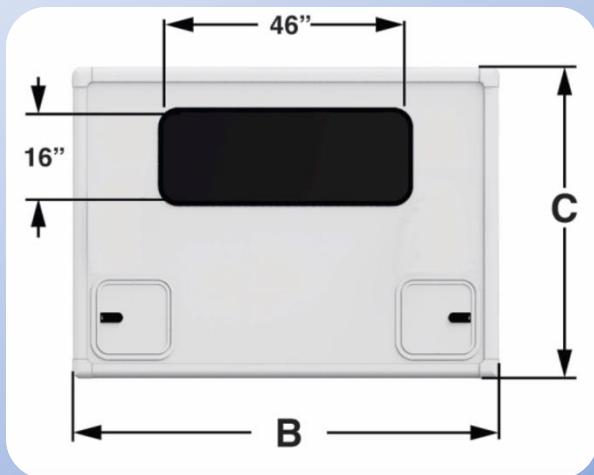

DC-27

The DC-27 Rest cab sleeper lets you add a 24" x 80" mattress and a customizable vocational interior. The easy access side compartments allow the driver to Stowe items from the inside or outside. The short CA of the DC-27 is great for upgrading existing tractors where swing clearance is an issue or new truck chassis with minimum frame space weight challenges apply. Like the XD-22, the XD-27 has an additional airbag that improves your ride and supports extra loading.
